

GENERAL AVIATION COCKPIT PRESENTATION

We will introduce our cockpit and locate every instrument. You will find below the cockpit of the general aviation Cessna 172 we will use for our first flight basics.

In the image below, equipment is not powered (Aircraft is not started and Battery is not connected) Depending on your platform and aircraft developer, instruments and equipment may vary.

The fuel tank selector is below the trim wheel and does not appear on this image. Since fuel tanks on this version of the Cessna 172 are equipped with a fuel cross feed system, we must just make sure that the selector is set to both.

We will not explain how to use these instruments and how they work since dedicated documentation deals with this aspect.
